工作原理

Work Principle

主动悬架系统通过采集车身、车速、转向角度、路面信号，由电子控制单元（ECU）控制悬架执行机构，使悬架系统的刚度、减振器的阻尼力及车身高度等参数得以改变，从而使汽车具有良好的乘坐舒适性、操纵稳定性以及通过性。

The active suspension system controls the suspension actuator by the electronic control unit (ECU) through collecting the body, speed, steering angle and road signals to modify the suspension system parameters such as the stiffness, damping force and body height, so that the car has a good riding comfort, handling stability, and passing ability.

优点 Advantages:

使悬架随不同的路况和行驶状态做出不同的反应，大幅缩短刹车制动距离，有效提高驾驶的安全性、舒适性。

To make the suspension respond differently to different road conditions and driving conditions, sharply shortening the braking distance, effectively improving the safety and comfort of driving.

主要构造 Main Structure:

由传感器、线束、电子控制单元及可调阻尼力减振器组成。

Be made up of sensor, wire harness, electronic control unit and adjustable damping shock absorber.

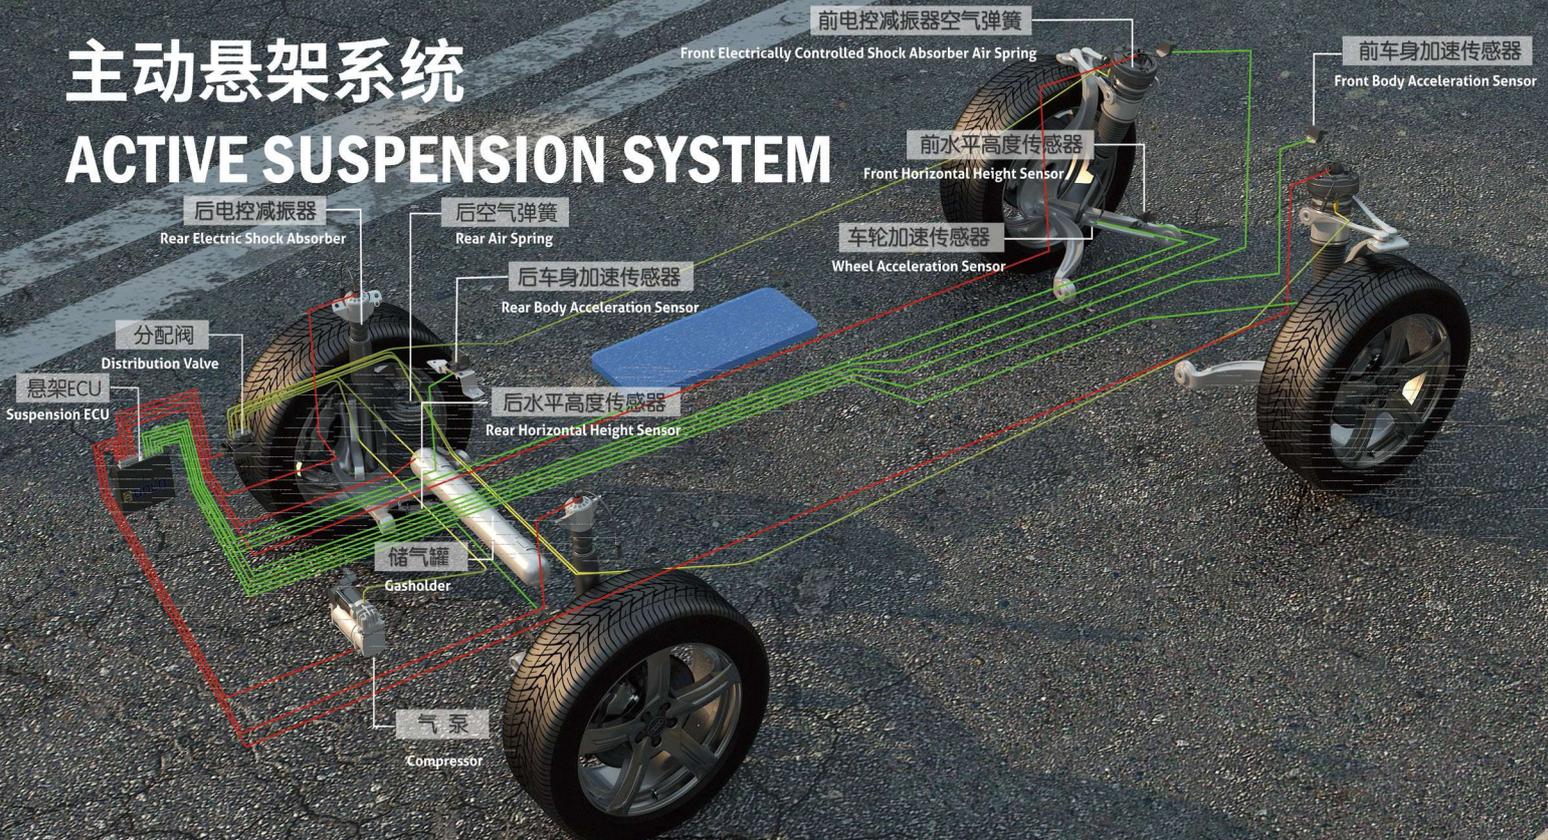

控制技术 Control Technology:

最优控制、预瞄控制、自适应控制、模糊控制、神经网络控制。

Optimal control, preview control, self-adaptive control, fuzzy control, neural network control.

主动悬架系统

ACTIVE SUSPENSION SYSTEM

主动悬架系统 Active Suspension

ADS自动可调式阻尼系统 Adaptive Damping System

System可调式避振系统，即阻尼可运动性的模式，ECU控制器主动调整减振器的软硬度，来满足驾驶者的需求。

The ECU controller actively adjusts the softness and hardness of the shock absorber to meet the needs of the driver.

EDC自动电子阻尼控制： Electronic Damper Control

ECU依路面信息主动控制调节减振器，再根据各传感器接收到的车辆动态参数信息，事实改变车身跳动和弯道驾驶产生的侧倾，以维持正确的车辆实时动态反应。

The ECU actively controls and adjusts the shock absorber according to the road surface information, and then, according to the dynamic parameter of the vehicle received by each sensor, it actually changes the body jumping and the roll generated by driving on the curve, so as to maintain the correct real-time dynamic response of the vehicle.

CDC自动连续阻尼控制 Continuous Damper Control

其按照路面情况和行驶条件，ECU利用电磁阀连续调节减振器的阻尼，以确保最佳的操控稳定性和乘坐舒适性。

In accordance with the road conditions and driving conditions, ECU continuously adjusts the damping of the shock absorber by solenoid valve to ensure optimal handling stability and ride comfort.

空气弹簧减振器系列： Air Spring Series

空气弹簧减振器由气室、橡胶弹性隔膜、支撑板三部分组成的弹性元件，是一种内部充气的密闭容器，ECU利用空气内能变化达到隔振目的。

The air spring shock absorber is an elastic element composed of a gas chamber, rubber elastic diaphragm and supporting plate. It is an airtight container filled with air. ECU uses the change of energy in the air to achieve the purpose of vibration isolation.

MFD磁流变阻尼： Magnetorheological Damper

通过改变磁场大小来改变磁流变液粘度，达到调整阻尼力的目的。

By changing the magnetic field to change the viscosity of magnetorheological fluid, the damping force can be adjusted.
