EXPERTISE LEAD EXCELLENCE

Temco Driving belts

Timing Belts

V-Ribbed Belts

Raw Edge Cogged Belts

Raw Edge Laminate Belts

Raw Edge Plain Belts

Features and benefits:

- Drive of alternator that supply electricity
- Drive of water pump that supply recirculated cooling water
- Drive of fans of cooler
- Drive of power pump
- Drive of air compressor
- Drive of camshaft that controls the air suction/exhaust valve

EXPERTISE LEAD EXCELLENCE

Temco

Timing Belts

Features:

1. Low noise operation
2. No need of lubricant
3. Prevent skidding
4. Conservation of fuel and good economy
5. Super-high mechanical efficiency

Structure and material:

1. High tensile body (core wire): glass fiber with high tensile strength and elasticity that prevent belts from stretching.
2. Rubber teeth: strong thermotolerance and oil resistance, and super strong cohesion between core wire of tensile body and rubber teeth.
3. Nylon fabric: excellent frictional resistance and low skin-friction coefficient which prolong the service life of product.

V-Ribbed Belts

Features:

1. Its excellent bending and straightening ability makes it suitable for small belt wheel and inverted bending and straightening condition
2. Good transmission efficiency
3. Low noise
4. Satisfying drive
5. Fiber reinforced compound rubber ensures excellent thermo tolerance, oil resistance and attrition resistance

Structure and material:

1. Upper fabric: synthetic fabric containing special rubber layer ensures good heat resistance, oil resistance and wearability.
2. Tensile body (core wire): heat-treated core wire makes it can endure high shock loading.
3. Adhesion rubber: keep the adhesive force between core wire and upper core rubber and thus protect tensile body.
4. Upper core rubber (RIBS): fortifying fiber of core rubber provides good side pressure ability and wearability.

V-Belts

Raw Edge Cogged Belts

Features:

1. High elasticity, suitable for high elasticity or small wheel diameter application.
2. All parts of belt can keep in same performance during the whole serviceable life.
3. Good thermotolerance, oil resistance and attrition resistance

Structure and material:

1. Upper fabric: features high elasticity, thermotolerance, oil resistance and wearability.
2. Tensile body: composed of low-dilation and high-strength core wire, features high elasticity and stable length.
3. Upper core rubber: composed of fortifying fiber rubber, features excellent durability and smooth performance.
4. Bottom rubber: composed of elastic canvas, is shock resistance and can prevent rubber from cleavage

Raw Edge Laminated Belts

Features:

1. Noise reduction
2. Prevent slipping of belt
3. Shock resistance
4. Good thermotolerance, oil resistance and attrition resistance

Structure and material:

1. Upper fabric: features high elasticity, thermotolerance, oil resistance and wearability.
2. Tensile body: composed of low-dilation and high-strength core wire, features high elasticity and stable length.
3. Upper core rubber: composed of fortifying fiber rubber, features excellent durability and smooth performance.
4. Bottom rubber: composed of multiple ply canvas, can absorb noise and operate quietly.

Raw Edge Plain Belts

Features:

1. The tight connection with belt wheel can prevent slipping of belt.
2. Good thermotolerance, oil resistance and wearability.

Structure and material:

1. Upper fabric: features high elasticity, thermotolerance, oil resistance and wearability.
2. Tensile body: high elasticity and stable length.
3. Adhesion glue: excellent durability and stable power transmission.
