CHROMED PISTON ROD

Super strong induction hardened chrome piston rod engineered to handle rigours of heavy loads and touch touring.

SLIP RING

Teflon infused bronze slip ring ensures a more consistent and uniform damping performance by providing better control of oil flow between the rod and rod guide.

RESERVE TUBE

Heavy gauge steel fully machined thicker than competitor's wall tubing to protect internal components from stone damage and ensure total reliability.

QUALITY OIL SEAL

Large, durable seal incorporates new gas retention check valve design to virtually eliminate contaminant damage while providing outstanding gas & oil retention.

HIGH FLOW PISTON

Free flowing design reduces aeration and high oil temperature, extending shock absorber performance under harsh conditions

ALL WEATHER OIL

Petroleum based, high performance formula designed to resist fade & aeration for improved durability and shock absorber performance.

- Outstanding Resistance to high operation temperature
- Durability proven under intensive in & out-door tests
- Engineered for road drivability and off road touring
- High safety and excellent vehicle handling experience

Reliable Shock

...Improve your driving experience
For a safety journey time after time

WWW.0086PARTS.COM

- More comfort and safety through the gas pressure twin-tube design
- Specifically matched to every model as well as every engine variant
- High safety and excellent vehicle handling
- Special dampening oil for consistent driving characteristics
- More comfort even in cold temperatures, more safety reserves in hot temperatures
- Sensitive response characteristics and higher roll-off comfort
- Tested intensively
- Quality standards higher than the legal requirement
